	Course Plan		
Module	Contents	Hou rs (54)	End Sem Exam Marks
Ι	Review of elementary set theory : Algebra of sets – Ordered pairs and Cartesian products – Countable and Uncountable sets Relations :- Relations on sets –Types of relations and their properties – Relational matrix and the graph of a relation – Partitions – Equivalence relations - Partial ordering- Posets – Hasse diagrams - Meet and Join – Infimum and Supremum Functions :- Injective, Surjective and Bijective functions - Inverse of a function- Composition	3 6 1	15 %
п	Review of Permutations and combinations, Principle of inclusion exclusion, Pigeon Hole Principle, <b>Recurrence Relations</b> : Introduction- Linear recurrence relations with constant coefficients- Homogeneous solutions – Particular solutions – Total solutions <b>Algebraic systems</b> :- Semigroups and monoids - Homomorphism, Subsemigroups and submonoids	3 4 2	15 %
	FIRST INTERNAL EXAM		
III	Algebraic systems (contd):- Groups, definition and elementary properties, subgroups, Homomorphism and Isomorphism, Generators - Cyclic Groups, Cosets and Lagrange's Theorem Algebraic systems with two binary operations- rings, fields-sub rings, ring homomorphism	1	15 %
IV	Lattices and Boolean algebra :- Lattices –Sublattices – Complete lattices – Bounded Lattices – Complemented Lattices – Distributive Lattices – Lattice Homomorphisms. Boolean algebra – sub algebra, direct product and homomorphisms		15 %
	SECOND INTERNAL EXAM		
V	<b>Propositional Logic:</b> - Propositions – Logical connectives – Truth tables	2	20 %
	Tautologies and contradictions - Contra positive - Logical	3	

	equivalences and implications		
	Rules of inference: Validity of arguments.	3	
	Predicate Logic:-		
	Predicates – Variables – Free and bound variables – Universal and Existential Quantifiers – Universe of discourse.	3	
VI	Logical equivalences and implications for quantified statements – Theory of inference : Validity of arguments.	3	20 %
	<b>Proof techniques:</b> Mathematical induction and its variants – Proof by Contradiction	L	
	– Proof by Counter Example – Proof by Contra positive.	3	
	END SEMESTER EXAM		

- 1. There will be *five* parts in the question paper A, B, C, D, E
- 2. Part A
  - a. Total marks : 12
  - b. <u>Four</u> questions each having <u>3</u> marks, uniformly covering module I and II; All <u>four</u> questions have to be answered.
- 3. Part B
  - a. Total marks : 18
  - b. <u>*Three*</u> questions each having <u>9</u> marks, uniformly covering module I and II; T<u>wo</u> questions have to be answered. Each question can have a maximum of three subparts
- 4. Part C
  - a. Total marks : 12
  - b. <u>Four</u> questions each having <u>3</u> marks, uniformly covering module III and IV; All <u>four</u> questions have to be answered.
- 5. Part D
  - a. Total marks : 18
  - b. <u>*Three*</u> questions each having <u>9</u> marks, uniformly covering module III and IV; T<u>wo</u> questions have to be answered. Each question can have a maximum of three subparts
- 6. Part E
  - a. Total Marks: 40
  - b. <u>Six</u> questions each carrying 10 marks, uniformly covering modules V and VI; <u>four</u> questions have to be answered.
  - c. A question can have a maximum of three sub-parts.
- 7. There should be at least 60% analytical/numerical questions.

Course code	Course Name I	L-T-P -Credits	Year of Introduction
CS202	Computer Organization and Architecture	3-1-0-4	2016
Pre-requi	site: CS203 Switching theory and logic design		
Course O	bjectives		
1. To	impart an understanding of the internal organiz	zation and operati	ions of a computer.
2. То	introduce the concepts of processor logic desig	gn and control log	gic design.
Syllabus	AFLADUULI	VALA	1 V 1
Fundamen	tal building blocks and functional units of a	computer. Exec	ution phases of an
instructior	n. Arithmetic Algorithms. Design of the process	sing unit – how a	arithmetic and logic
	s are performed. Design of the control unit -		
control. 1	I/O organisation - interrupts, DMA, differ	rent interface s	tandards. Memory
	n – different types.	1 L L	
	d outcome		
	will be able to:		
	entify the basic structure and functional units of		
	alyze the effect of addressing modes on the exec	-	•
	sign processing unit using the concepts of ALU	•	•
	entify the pros and cons of different types of con	0 0	in processors.
	ect appropriate interfacing standards for I/O dev		
6 1dc			
0. 100	entify the roles of various functional units of a co	computer in instru	iction execution.
Text Boo		computer in instru	iction execution.

II	<b>Basic processing unit</b> – fundamental concepts – instruction cycle - execution of a complete instruction –multiple- bus organization – sequencing of control signals.	10	15%
	Arithmetic algorithms: Algorithms for multiplication and division of binary and BCD numbers — array multiplier —Booth's	ΤA	N A
	multiplication algorithm — restoring and non- restoring division — algorithms for floating point, multiplication and division.		AL
	FIRST INTERNAL EXAMINATIO	DN	
III	I/O organization: accessing of I/O devices – interrupts –direct memory access –buses –interface circuits –standard I/O interfaces (PCI, SCSI, USB)	8	15%
IV	Memory system : basic concepts –semiconductor RAMs –memory system considerations – semiconductor ROMs –flash memory –cache memory and mapping functions.	9	15%
	SECOND INTERNAL EXAMINATI	ION	
V	<ul> <li>Processor Logic Design: Register transfer logic – inter register transfer – arithmetic, logic and shift micro operations –conditional control statements.</li> <li>Processor organization:–design of arithmetic unit,</li> </ul>	9	20%
	logic unit, arithmetic logic unit and shifter –status register –processor unit –design of accumulator.		
VI	Control Logic Design: Control organization – design of hardwired control –control of processor unit –PLA control. Micro-programmed control: Microinstructions –horizontal and vertical micro instructions – micro-program sequencer –micro programmed CPU organization.	9	20%
	END SEMESTER EXAM		

- 1. There will be *five* parts in the question paper A, B, C, D, E
- 2. Part A
  - a. Total marks : 12
  - b. <u>Four</u> questions each having <u>3</u> marks, uniformly covering module I and II; All <u>four</u> questions have to be answered.
- 3. Part B
  - a. Total marks : 18
  - <u>Three</u> questions each having <u>9</u> marks, uniformly covering module I and II; T<u>wo</u> questions have to be answered. Each question can have a maximum of three subparts
- 4. Part C
  - a. Total marks: 12
  - b. <u>Four</u> questions each having <u>3</u> marks, uniformly covering module III and IV; All <u>four</u> questions have to be answered.
- 5. Part D
  - a. Total marks : 18
  - b. <u>Three</u> questions each having <u>9</u> marks, uniformly covering module III and IV; T<u>wo</u> questions have to be answered. Each question can have a maximum of three subparts
- 6. Part E
  - a. Total Marks: 40
  - b. <u>Six</u> questions each carrying 10 marks, uniformly covering modules V and VI; <u>four</u> questions have to be answered.

- c. A question can have a maximum of three sub-parts.
- 7. There should be at least 60% analytical/numerical/design questions..

- 5. Part D
  - a. Total marks : 18
  - <u>*Three*</u> questions each having <u>9</u> marks, uniformly covering module III and IV;
     <u>*Two*</u> questions have to be answered. Each question can have a maximum of three subparts
- 6. Part E
  - a. Total Marks: 40
  - b. <u>Six</u> questions each carrying 10 marks, uniformly covering modules V and VI; <u>four</u> questions have to be answered.
  - c. A question can have a maximum of three sub-parts.
- 7. There should be at least 60% analytical/numerical/design questions.

Course code	Course Name	L-T-P -Credits	Year of Introduction			
CS208	Principles of Database Design	2-1-0-3	2016			
Pre-requisite: CS205 Data structures						

#### **Course Objectives**

- 1. To impart the basic understanding of the theory and applications of database management systems.
- 2. To give basic level understanding of internals of database systems.
- 3. To expose to some of the recent trends in databases.

#### Syllabus:

Types of data, database and DBMS, Languages and users. Software Architecture, E-R and Extended E-R Modelling, Relational Model – concepts and languages, relational algebra and tuple relational calculus, SQL, views, assertions and triggers, HLL interfaces, relational db design, FDs and normal forms, Secondary storage organization, indexing and hashing, query optimization, concurrent transaction processing and recovery principles, recent topics.

#### **Expected outcome**.

Students will be able to:

- 1. define, explain and illustrate the fundamental concepts of databases.
- 2. construct an Entity-Relationship (E-R) model from specifications and to perform the transformation of the conceptual model into corresponding logical data structures.
- 3. model and design a relational database following the design principles.
- 4. develop queries for relational database in the context of practical applications
- 5. define, explain and illustrate fundamental principles of data organization, query optimization and concurrent transaction processing.
- 6. appreciate the latest trends in databases.

#### **Text Books:**

- 1. Elmasri R. and S. Navathe, *Database Systems: Models, Languages, Design andApplication Programming*, Pearson Education, 2013.
- 2. Sliberschatz A., H. F. Korth and S. Sudarshan, *Database System Concepts*, 6/e, McGraw Hill, 2011.

### **References:**

- 1. Powers S., *Practical RDF*, O'Reilly Media, 2003.
- 2. Plunkett T., B. Macdonald, et al., Oracle Big Data Hand Book, Oracle Press, 2013.

	Course Plan					
Module	Contents	Hours (42)	Sem.ExamMarks			
I	<b>Introduction:</b> Data: structured, semi-structured and unstructured data, Concept & Overview of DBMS, Data Models, Database Languages, Database Administrator, Database Users, Three Schema architecture of DBMS. Database architectures and classification. (Reading: ElmasriNavathe, Ch. 1 and 2. Additional Reading: Silbershatz, Korth, Ch. 1) <b>Entity-Relationship Model:</b> Basic concepts, Design Issues, Mapping Constraints,	06	15%			

	Keys, Entity-Relationship Diagram, Weak Entity Sets,		
	Relationships of degree greater than 2 (Reading:		
	ElmasriNavathe, Ch. 7.1-7.8)		
	Relational Model: Structure of relational Databases,		
	Integrity Constraints, synthesizing ER diagram to		
	relational schema (Reading: ElmasriNavathe, Ch. 3 and		
II	8.1, Additional Reading: Silbershatz, Korth, Ch. 2.1-	06	15%
	2.4) Database Languages: Concept of DDL and DML	AN	
	relational algebra (Reading: Silbershatz, Korth, Ch	AIV	1
	2.5-2.6 and 6.1-6.2, ElmasriNavathe, Ch. 6.1-6.5)	AI	
	FIRST INTERNAL EXAM	A	-
	Structured Query Language (SQL): Basic SQL	/	
	Structure, examples, Set operations, Aggregate		
	Functions, nested sub-queries (Reading:		
	ElmasriNavathe, Ch. 4 and 5.1) Views, assertions and	07	15%
III	triggers (Reading: ElmasriNavathe, Ch. 5.2-5.3,	07	1370
	Silbershatz, Korth Ch. 5.3). Functions, Procedures		
	and HLL interfaces (Reading: Silbershatz, Korth Ch.		
	5.1-5.2).		
	Relational Database Design: Different anomalies in	-	
	designing a database, normalization, functional		
	dependency (FD), Armstrong's Axioms, closures,		
	Equivalence of FDs, minimal Cover (proofs not		
IV	required). Normalization using functional dependencies,	07	15%
- '	INF, 2NF, 3NF and BCNF, lossless and dependency		
	preserving decompositions (Reading: Elmasri and		
	Navathe, Ch. 14.1-14.5, 15.1-15.2. Additional Reading:	1.17	1C. 📕
	Silbershatz, Korth Ch. 8.1-8.5)		
	SECOND INTERNAL EXAM	7	1
	Physical Data Organization: index structures, primary,		
	secondary and clustering indices, Single level and		
	Multi-level indexing, B-Trees and B+-Trees (basic		
	structure only, algorithms not needed), Indexing on		
V	multiple keys (Reading Elmasri and Navathe, Ch. 17.1-	08	20%
v	17.4) <b>Query Optimization</b> : algorithms for relational		
	algebra operations, heuristics-based query optimization,		
	Cost-based query optimization (Reading Elmasri and		
	Navathe, Ch. 18.1-18.3, 18.6-18.8)		
<b>X7T</b>	concurrency control and recovery acid properties, serial	08	20%
VI	and concurrent schedules, conflict serializability. Two-	00	20 /0
	phase locking, failure classification, storage structure,		
	stable storage, log based recovery, deferred database		

	modification, check-pointing, (Reading Elmasri and			
	Navathe, Ch. 20.1-20.5 (except 20.5.4-20.5.5) ,			
	Silbershatz, Korth Ch. 15.1 (except 15.1.4-15.1.5), Ch.			
	16.1 – 16.5) Recent topics (preliminary ideas only):			
	Semantic Web and RDF(Reading: Powers Ch.1, 2),			
	GIS, biological databases (Reading: Elmasri and			
	Navathe Ch. 23.3-23.4) Big Data (Reading: Plunkett			
	and Macdonald, Ch. 1, 2)			
END SEMESTER EXAM				

- 1. There will be *five* parts in the question paper A, B, C, D, E
- 2. Part A
  - a. Total marks : 12
  - b. *Four* questions each having <u>3</u> marks, uniformly covering module I and II; All *four* questions have to be answered.
- 3. Part B
  - a. Total marks : 18
  - <u>*Three*</u> questions each having <u>9</u> marks, uniformly covering module I and II; <u>*Two*</u> questions have to be answered. Each question can have a maximum of three subparts
- 4. Part C
  - a. Total marks : 12
  - b. <u>Four</u> questions each having <u>3</u> marks, uniformly covering module III and IV; All <u>four</u> questions have to be answered.
- 5. Part D
  - a. Total marks : 18
  - b. <u>Three</u> questions each having <u>9</u> marks, uniformly covering module III and IV; T<u>wo</u> questions have to be answered. Each question can have a maximum of three subparts
- 6. Part E
  - a. Total Marks: 40
  - b. <u>Six</u> questions each carrying 10 marks, uniformly covering modules V and VI; <u>four</u> questions have to be answered.

- c. A question can have a maximum of three sub-parts.
- 7. There should be at least 60% analytical/numerical/design questions.

Course No.	Course Name	L-T-P - Credits	Year of Introduction
CS231	DATA STRUCTURES LAB	0-0-3-1	2016
Pre-requisite:	CS205 Data structures		•
<b>Course Object</b>			
1. To impl	lement basic linear and non-linear data str	ructures and their major of	operations.
2. To impl	lement applications using these data struc	tures.	
3. To impl	lement algorithms for various sorting tech	miques.	
List of Exercis	es/Experiments : (Minimum 12 are to be	e done)	
1. Implem	entation of Stack and Multiple stacks usin	ng one dimensional array	, ** ·
	tion problems using stacks: Infix to post to not not not not not not not not not	fix conversion, postfix a	nd pre-fix
3. Implem	entation of Queue, DEQUEUE and Circu	lar queue using arrays.	
4. Implem	entation of various linked list operations.	**	
5. Implem	entation of stack, queue and their application	tions using linked list.	
6. Impl <mark>e</mark> m	entation of trees using linked list		
-	entation of polynomials using linked list, a nials. **	addition and multiplication	on of
-	entation of binary trees using linked lists versal. **	and arrays- creations, in	sertion, deletion
9. Implem	entation of binary search trees – creation	, insertion, deletion, sear	ch
10. Applica	tion using trees		
-	entation of sorting algorithms – bubble, in ursive), merge sort (recursive and non-rec	· · · ·	•
12. Implem	entation of searching algorithms – linear	search, binary search.**	
-	entation of graphs and computing various cy list, adjacency matrix.	parameters (in degree, o	ut degree etc.) -
14. Implem	entation of BFS, DFS for each representa	tion.	
-	entation of hash table using various mapp w resolving schemes.**	oing functions, various co	ollision and
16. Implen	nentation of various string operations.		

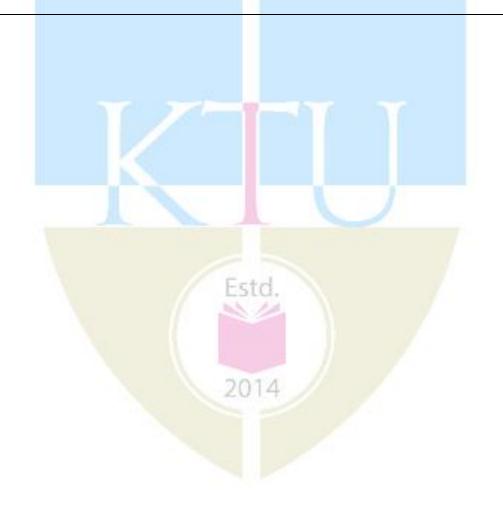

17. Simulation of first-fit, best-fit and worst-fit allocations.

18. Simulation of a basic memory allocator and garbage collector using doubly linked list.

\*\* mandatory.

# **Expected Outcome:**

- 1. appreciate the importance of structure and abstract data type, and their basic usability in different applications
- 2. analyze and differentiate different algorithms based on their time complexity.
- 3. implement linear and non-linear data structures using linked lists.
- 4. understand and apply various data structure such as stacks, queues, trees, graphs, etc. to solve various computing problems.
- 5. implement various kinds of searching and sorting techniques, and decide when to choose which technique.
- 6. identify and use a suitable data structure and algorithm to solve a real world problem.

Course code	Course Name	L-T-P-Credits	Year of Introduction
CS232	Free and Open Source Software Lab	0-0-3-1	2016
Pre-requisite	CS204 Operating systems		
	ctives: To expose students to FOSS environ	ment and introduce the	m to use open
-	es in open source platform.		Ĩ
List of Exerc	ises/Experiments: (Minimum 12 exercises/	experiments are manda	tory)
	g started with Linux basic commands and		-
	commands for redirection, pipes, filters, jo nd file system hierarchy.	b control, file ownersh	ip, file permissions
	Programming : Write shell script to show va	arious system configura	tion like
• Cu	rrently logged user and his logname	111	
	ur current shell		
• Yo	our home directory		
• Yo	our operating system type		
• Yo	our current path setting		
• Yo	our current working directory		
• Sh	ow Currently logged number of users		
4. Write	shell script to show various system configur	ation like	
• At	out your OS and version, release number, k	ernel version	
• Sh	ow all available shells		
• Sh	ow mouse settings		
• Sh	ow computer CPU information like process	or type, speed etc	
• Sh	ow memory information		
• Sh	ow hard disk information like size of hard-d	lisk, cache memory, mo	odel etc
• Fil	e system (Mounted)		
5. Shell s	cript program for scientific calculator.		
the cla ./ado	a scri <mark>pt called addnam</mark> es that is to be called sslist file, and <i>username</i> is a particular stude inamesclasslistusername cript should		<i>sslist</i> is the name o
	eck that the correct number of arguments wa	as received and print an	usage message if
	eck whether the classlist file exists and print eck whether the username is already in the f		t,
• pri	nt a message stating that the <mark>nam</mark> e <mark>already</mark> e	existed, or	
• ad	d the name to the end of the list.		
7. Versio	n Control System setup and usage using GI	Т.	
• Cr	eating a repository		
• Ch	ecking out a repository		
• Ac	lding content to the repository		
• Co	mmitting the data to a repository		

- Updating the local copy
- Comparing different revisions
- Revert
- Conflicts and Solving a conflict
- 8. Text processing and regular expression with Perl, Awk: simple programs, connecting with database e.g., MariaDB
- 9. Shell script to implement a script which kills every process which uses more than a specified value of memory or CPU and is run upon system start.
- 10. GUI programming : Create scientific calculator using Gambas or try using GTK or QT
- 11. Running PHP : simple applications like login forms after setting up a LAMP stack
- 12. Advanced linux commands curl, wget, ftp, ssh and grep
- 13. Application deployment on a cloud-based LAMP stack/server with PHP eg: Openshift, Linode etc.
- 14. Kernel configuration, compilation and installation : Download / access the latest kernel source code from *kernel.org*, compile the kernel and install it in the local system. Try to view the source code of the kernel
- 15. Virtualisation environment (e.g., xen, kqemu, virtualbox or lguest) to test an applications, new kernels and isolate applications. It could also be used to expose students to other alternate OSs like \*BSD
- 16. Compiling from source : learn about the various build systems used like the auto\* family, cmake, ant etc. instead of just running the commands. This could involve the full process like fetching from a cvs and also include autoconf, automake etc.,
- 17. Introduction to packet management system : Given a set of RPM or DEB, how to build and maintain, serve packages over http or ftp. and also how do you configure client systems to access the package repository.
- 18. Installing various software packages. Either the package is yet to be installed or an older version is existing. The student can practice installing the latest version. Of course, this might need Internet access.
  - Install samba and share files to windows
  - Install Common Unix Printing System(CUPS)

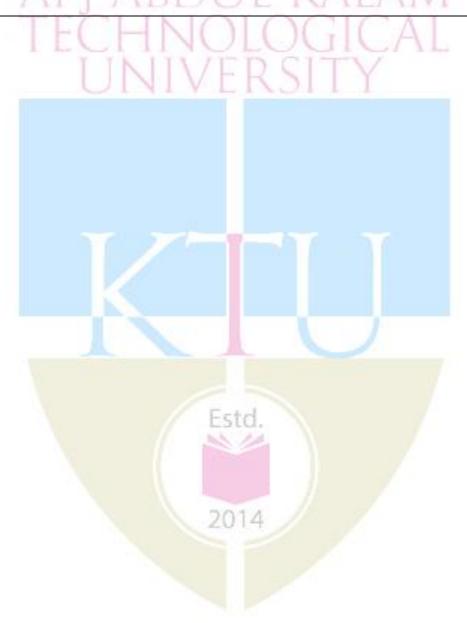

### **Expected outcome**:

- 1. Identify and apply various Linux commands
- 2. Develop shell scripts and GUI for specific needs
- 3. Use tools like GIT, .
- 4. Perform basic level application deployment, kernel configuration and installation, packet management and installation etc.

Course No.	Course Name	L-T-P - Credits	Year of Introduction
CS233	ELECTRONICS CIRCUITS LAB	0-0-3-1	2016
	CS207 Electronic devices & circuits		
<ol> <li>To desi</li> <li>To proconception</li> <li>To use electron</li> <li>To create evidence</li> </ol>	oduce the working of analog electronic cir ign, implement and demonstrate analog circ vide hands-on experience to the students so ts to practice. computer simulation tools such as PSPICE nic circuits. ate an ability to develop descriptions, expla	cuits using electronic co that they are able to pu c, or Multisim to the sim nations, predictions and	t theoretical nulation of models using
	he experiments in oral/report forms.	1 1 1	1
List of Exerci	ses/Experiments :		
	experiments are to be done in the semester.	, at least 6 each should l	be selected from
the first(Exp. 1	-10) and second(Exp. 11-20) half. Experin	nent no. 18 is compulso	ory).
1. Forwa	rd and reverse characteristics of PN diode	and Zener diode	
2. Input a	and output characteristics of BJT in CE cor	figuration and evaluation	on of parameters
3. RC int	egrating and differentiating circuits-Transi	ent response with differ	ent time constant
4. RC lov	w pass and high pass circuits- Frequency re	esponse with sinusoidal	input
5. Clippi	ng circuits (Positive, negative and biased) -	Transient and transfer	characteristics
6. Clamp	ing circuits (Positive, negative and biased)	- Transient characteristi	cs
7. Bridge	e Rectifier - with and without filter- ripple f	factor and regulation	
8. Simple	e Zener regulator- Line and load characteris	stics	
9. RC co	upled <mark>CE amplifier –</mark> Mid band gain and fr	equency response	
10. RC ph	ase shift or Wien bridge oscillator using tra	ansistor	
11. Astabl	e and Mon <mark>ostable multivibrators using trar</mark>	nsistors	
12. Series	voltage regulator (Two transistors)- Line a	nd load characteristics	
13. Voltag	ge regulator using LM 723)- Line and load	characteristics	
14. Astabl	e and mono stable multivibrators using 555	5 Timer	
15. Inverti	ing and non-inverting amplifier using op-ar	np IC741	
16. Instrur	nentation amplifier using op-amp IC741		
17. RC ph	ase shift or Wien bridge oscillator using op	o-amp IC741	
18. Simula	ation of simple circuits (at least 6 from abo	ve) using any SPICE so	oftware(Transient,
AC an	d DC analysis)		

# **Expected Outcome:**

- 1. identify basic electronic components, design and develop electronic circuits.
- 2. Design and demonstrate functioning of various discrete analog circuits
- 3. Be familiar with computer simulation of electronic circuits and how to use it proficiently for design and development of electronic circuits.
- 4. Understand the concepts and their applications in engineering.
- 5. Communicate effectively the scientific procedures and explanations in formal technical presentations/reports.

Course code	Course Name	L-T-P - Credits	Year of Introduction
CS234	DIGITAL SYSTEMS LAB	0-0-3-1	2016
Pre-requisite:	CS203 Switching theory and logic design	l	
Course Object	ives:		
	liarize students with digital ICs, the build		
2. To prov their bel	ride students the opportunity to set up di haviour	ifferent types of digital	circuits and study
List of Exercis	es/Experiments : ( minimum 12 exercise	es/experiments are manda	atory)
1. Familia	rizations and verification of the truth table	es of basic gates and univ	versal gates.
2. Verifica	tion of Demorgan's laws for two variable	s.	
3. Implem	entation of half adder and full adder circu	its using logic gates.	
4. Implem	entation of half subtractor and full subtrac	ctor circuits using logic g	gates.
5. Implem	entation of parallel adder circuit.		
6. Realizat	ion of 4 bit adder/subtractor and BCD ad	der circuits using IC 748	3.
7. Implem	entation of a 2 bit magnitude comparator	circuit using logic gates.	
8. Design	and implementation of code convertor cir	cuits	
9. a) BCD	to excess 3 code b) binary to gray code		
with var	entation of multiplexer and demultiplexer ious multiplexer and demultiplexer ICs. ion of combinational circuits using multi		
12. Implem	entation of SR, D, JK, JK master sla	ave and T flip flops u	sing logic gates
Familia	rization with IC 7474 and IC 7476.		
13. Implem	entation of shift registers using flip flop	Integrated Circuits.	
14. Implem	entation of ring counter and Johnson cour	nter <mark>using flip flop In</mark> tegr	ated Circuits.
15. Realizat	ion of a <mark>synchronous c</mark> ounters using flip f	lop I <mark>Cs.</mark>	
counter	ion of synchronous counters using flip Integrated Circuits. entation of a BCD to 7 segment decoder a		tion with variou
18. Simulat	ion of Half adder, Full adder using VHDI		
(Note: T	The experiments may be done using hardw	vare components and/or	VHDL)
Course outcon	ne:		

- identify and explain the digital ICs and their use in implementing digital circuits.
   design and implement different kinds of digital circuits.
